

## REINSTALLING A NEW VERSION OF QENSH:

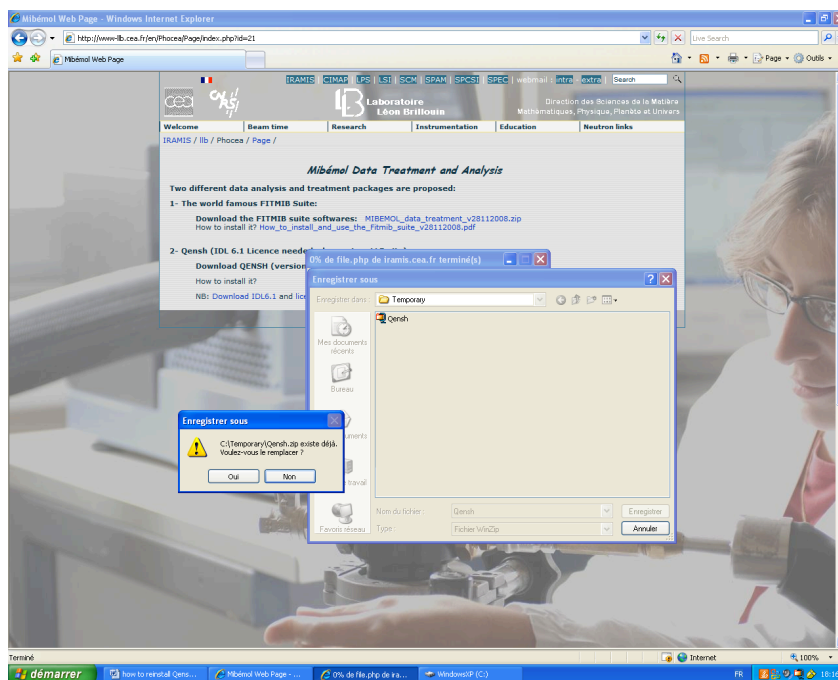

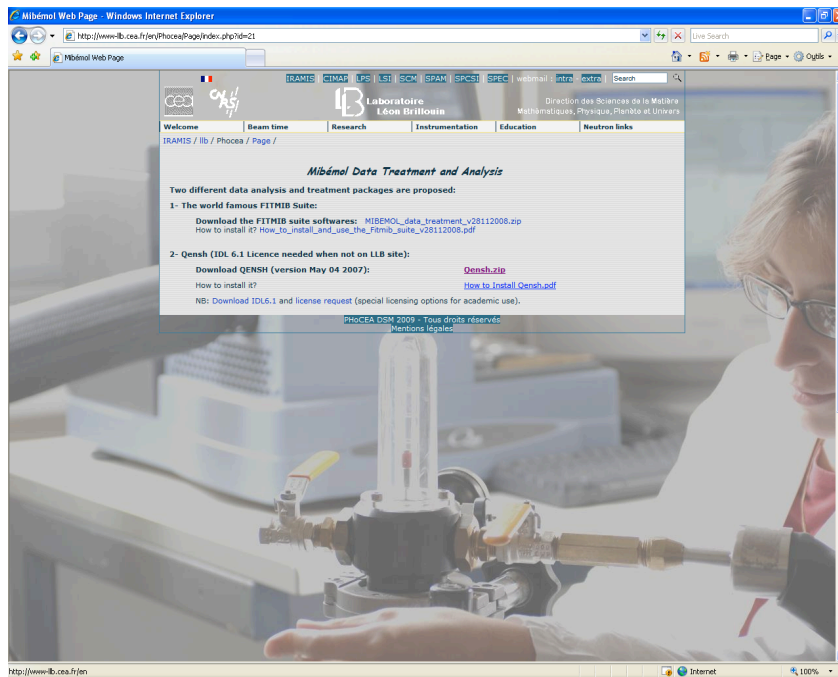

**NOTE:** You have to be in an account that has writing privileges into the C:\ drive.

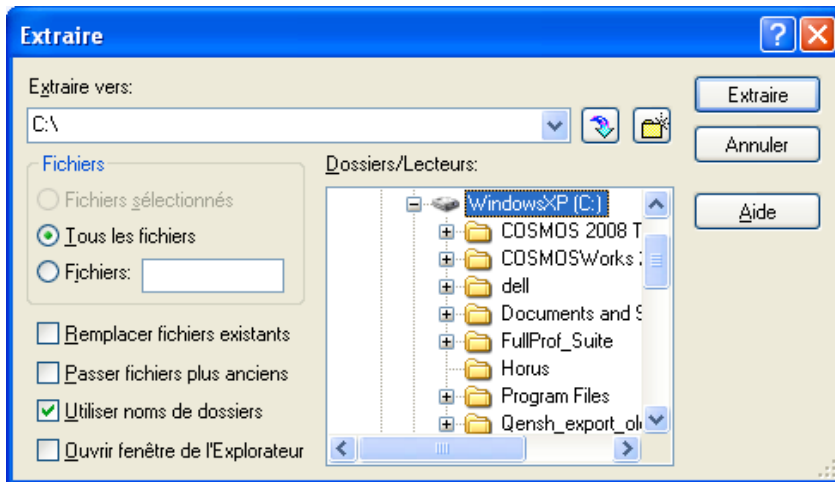

- In C:\ rename the folder "Qensh\_export" to "Qensh\_export\_old" (do NOT delete at this stage!)

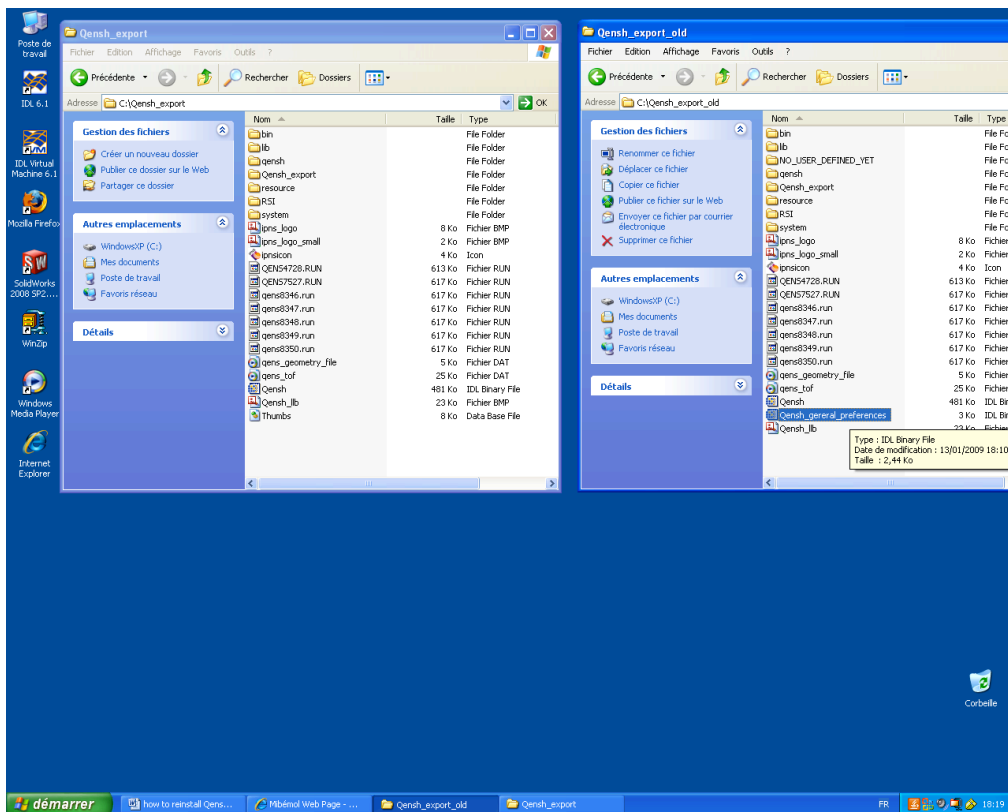

Go to the webpage on MIBEMOL (<http://www-llb.cea.fr/en/Phocea/Page/index.php?id=21>) and download the desired version of QENSH:

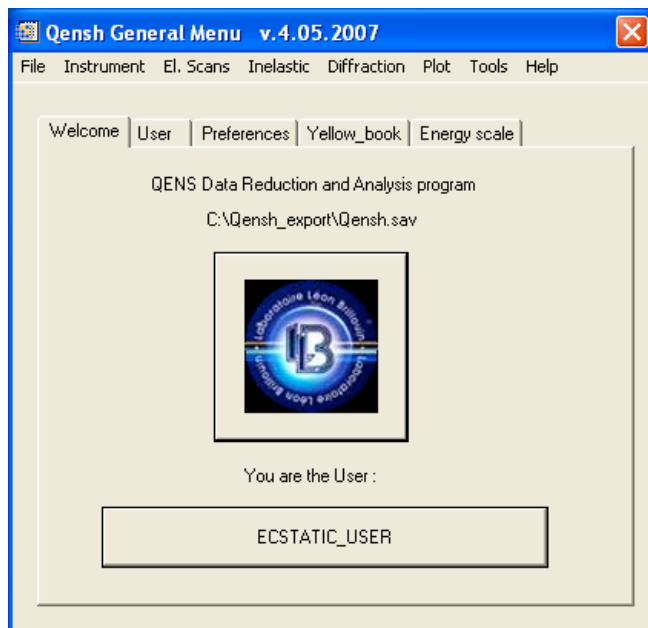

- Save the file "Qensh.zip" again in C:\Temporary overwriting the old .zip file from last Qensh installation

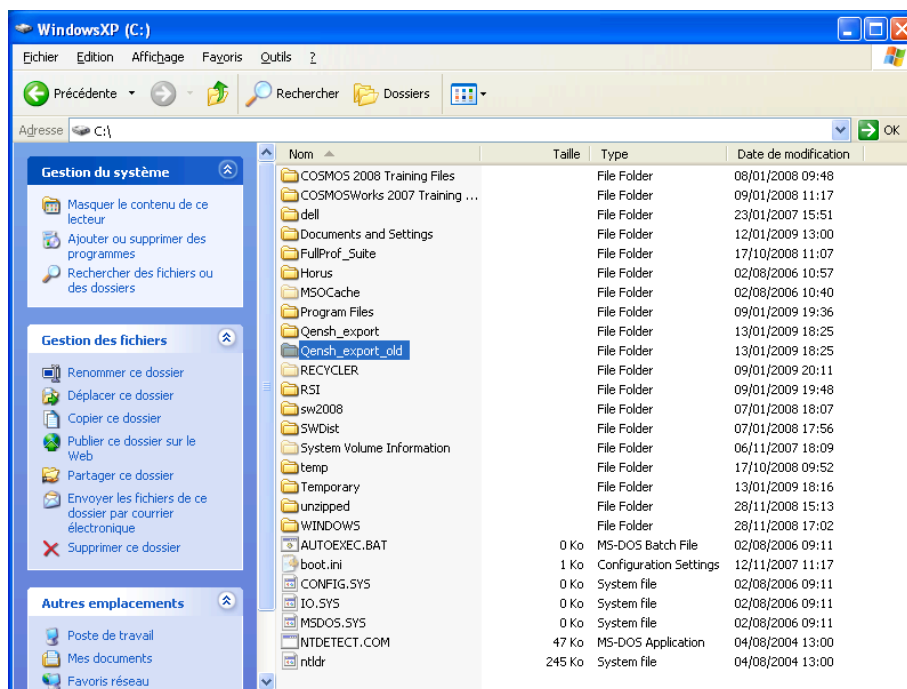

- Extract the downloaded .zip file into C:\, it shall form again a directory called "Qensh\_export"

- **IMPORTANT:** copy the "Qensh\_general\_preferences" file from "Qensh\_export\_old" to "Qensh\_export" folder. This allows you to PRESERVE all the users that you might have created within Qensh.

- No need to make any other changes, when you click on the QENSH short-cut on the Desktop, the above window should appear. The Header tells you again which version of Qensh you are using.

- Finally, delete the "Qensh\_export\_old" folder to clear up your disk.
