

## **Electron and spin dynamics in correlated systems**

Friday, December 14, 2018

Université de Cergy-Pontoise, site de Neuville  
Rue d'Eragny, Neuville sur Oise, 95 031 Cergy-Pontoise (RER A : "Neuville Université")

This 3<sup>rd</sup> edition of satellite workshop of the ATTOLAB users meeting addresses a community of experimentalists and theoreticians interested in electron and/or spin ultrafast dynamics in condensed matter.

It is intended to be an informal exchange of potential collaborators/users of our or other experimental setups on the FAB10 beamline at ATTOLab that started the operation this year. Our experimental chamber is currently attached to the FAB10 beamline, hopefully we will be able to discuss some new results.

The program includes invited contributions and a poster session to stimulate discussions during the coffee breaks and the lunch buffet.

The workshop is free, however the participants are asked to register sending the following information to:

[karol.hricovini@u-cergy.fr](mailto:karol.hricovini@u-cergy.fr)

Name/First name

Institution

Will present a poster: Yes /No

Title of the poster

Will have lunch: Yes/No
